

A solution that is injected to relax and smooth fine lines and wrinkles on the face caused by muscle contractions. The treatment is also preventative, so there are advantages to starting treatment early in preventing these lines from developing. The most commonly treated areas are the “11” lines between the eyebrows, the forehead lines, bunny lines on the nose, crow’s feet at the periorbital area, and the upper lip (for the “lip flip” effect).

BENEFITS

- Fast acting
- Long-lasting results
- Suitable for all skin types
- Customized to address each individual concerns
- Little to no recovery time
- Can be used in conjunction with other cosmetic injectables and treatments

WHAT TO EXPECT DURING AND AFTER THE TREATMENT

- Our Aesthetic NP Injectors will provide a full facial assessment and formulate a personalized treatment plan. You may be able to be injected that day!
- Treatment will be injected into the area of concern
- There may be redness, bruising, swelling, tenderness, and/or itching near the injection site
- You may begin to notice results within 48 hours, with full results in 30 days for moderate to severe crow’s feet, forehead, and frown lines
- Results can last up to 4 month for moderate to severe crow’s feet, forehead, and frown lines

POST TREATMENT CARE

- You can safely apply a cold compress on treated areas to relieve discomfort and minimize swelling. However, don’t put pressure on the cold compress.
- Taking NSAIDs or applying heat to swollen injection areas would not only worsen discomfort, it could cause migration.
- Avoid strenuous exercise for at least 24 hours as this may increase the risk of swelling and bruising around the treatment areas
- No lying down or leaning forward for 4 hours
- Try to sleep on your back the first night after treatment
- Avoid alcohol for 48 hours prior to and after treatment
- Avoid sun exposure for up to 2 days as heat may increase your blood pressure and promote bruising

POSSIBLE SIDE EFFECTS

Botox injections are usually safe when you're under the care of a licensed and skilled health care provider. The procedure can result in unwanted results or even cause harm if it's given incorrectly. Possible side effects and unwanted results include:

- Discomfort, swelling, or bruising at the injection site which may last up to 48 hours
- Headache
